

About This Report

This CSR Report covers the efforts of the Daikin Group's CSR (corporate social responsibility). It reports on our basic CSR philosophy, achievements in fiscal 2010, and plans for the future. We organized this CSR report by what we consider to be the key themes of our CSR activities—the environment, quality & customer satisfaction, human resources, and social contribution. We have features on two areas that we have particularly focused on in recent years: the prevention of global warming and the fostering of human resources.

Our website gives more detailed information and information on past activities. In addition to a chapter on environmental protection, the website has other chapters organized by stakeholders: customers, business partners, shareholders and investors, employees, and communities. This makes it easier for each stakeholder to get to the information.
