Monitoring and Reforestation Progress Reports

The 300 hectares of trees that were planted are growing tall and strong. We monitor the state of these trees every month.

Monitoring the site

The aquaculture pond in Lamping Village, which is part of the project, has yielded a wealth of fish! The project has thus helped bring economic stability to the village.

Boosting Organizational Capabilities

In order to strengthen the capabilities of the village cooperative, which was officially registered during the last reporting period, we have been facilitating meetings between the cooperative and government members responsible for certifying the cooperative's products. Acquiring government certification is crucial to selling the products on the market.

Meeting between the cooperative and government officials

Widespread Media Campaign and PR Efforts

During the reporting period, 25 students from the University of British Columbia in Canada visited to learn about the Green Wall project. We also visited local school to publicize the project, with about 40 students taking part.

Sign Boards

The sign boards placed around three locations are monitored monthly. At present, the signs are in top condition and require no maintenance.

Honored with Conservation Award

On April 13, 2015, I was honored by Conservation International for my contributions to this project. This award is not just for me, but also for the many people involved. I am especially grateful to Daikin for the opportunities presented by the Green Wall project. I am also thankful to the CI Japan team for its support.
