**Progress Report on Monitoring and Reforestation**

CI, park rangers, and local community members conduct monthly monitoring of the trees that have been planted. Because trees can be affected by factors such as weather, pests, and human activities, such monitoring is crucial to ensure that they are growing healthy and strong. The majority of the 120,000 trees planted in 300 hectares of land are in good shape.

The planted trees literally form a “Green Wall”

**Stepping up the media campaign and communications**

To strengthen relations with the media, we invited news outlets to the Green Wall project site in November 2016. The six were Mongabay Indonesia, Media Indonesia, Good News from Indonesia, Tempo, National Geographic, and The Jakarta Post. See the links below for the stories they did on the project.

Mongabay Indonesia (in Indonesian)

## Signboards

The four signboards on the site are monitored every month. All were in good condition during the last quarter. One more signboard was erected in November, bringing the total to five.

Signboard 1 (Oct.–Dec. 2016)

Signboard 2 (Oct.–Dec. 2016)

Signboard 3 (Oct.–Dec. 2016)

Signboard 4 (Oct.–Dec. 2016)

New signboard erected in November 2016

### Catfish harvest

As part of CI's support of the Mina Mukti Dahlia village cooperative, in May 2016 catfish fry were released. Six months later, the grown catfish were harvested and ready for sale at the market.
